I read and reviewed "Thermal Comfort Temperature Evaluation in Hospital Wards for Patient Safety and Climate Change Sustainability". Thank you for allowing me to review an exciting topic. It is a valuable research for Iraq in terms of climate.

The title contains many different concepts, it should be chosen that describes the subject.

In the abstract, a basic research introduction should be written first. Please add the finding on which the proposed method is useful.

The introduction is quite weak. What is the gap in the literature regarding thermal comfort? What are the research hypotheses or research questions?

A hospital plan is not a method. The workspace title should be added.

Pay attention to the spelling of r^2 in Table 3.

Humidity element?

Editing and English grammar should be reviewed throughout the article.
