Review of: "Supply Chain and Digital Transformation of the Automotive Manufacturing Company during the COVID-19 Pandemic: A Case Study of PT. X"

Silvio Pires

Potential competing interests: No potential competing interests to declare.

In its current state the manuscript is very weak in terms of being a scientific article. In order to become a scientific article in fact, the manuscript would need to be redone in several key aspects, such as objective, research methodology and analysis of results. Furthermore, the text seems to have been written in a period where the pandemic was still predominant (would it be in 2020?), which is no longer the reality in June 2023. Furthermore, the authors would need to clearly demonstrate what the practical contribution and/or academic of the manuscript. Anyway, I hope that the authors understand my criticism in a constructive way and as an incentive for improvements. In this sense, I remember a popular saying here in the south of the planet: "whoever tells us no is not always our enemy, and whoever tells us yes is not always our friend."
