Potential competing interests: No potential competing interests to declare.

The research paper explores the relationship between various factors and the sustainable development of Micro and Small Enterprises (MSEs) in Africa. It investigates the impact of access to finances, infrastructure availability, institutional coordination, business market information access, government support, and technology utilization on the success of MSEs. The paper is well-structured and supported by a comprehensive literature review, highlighting the significance of MSEs in Africa's economic growth. However, it could improve by explicitly stating its hypotheses and addressing in-text citation consistency. The paper's conclusions are somewhat general, and more specific policy recommendations would enhance its value. Nonetheless, it offers valuable insights into factors affecting MSEs' sustainable development and provides a basis for future research and policy making in Africa.
