Potential competing interests: No potential competing interests to declare.

Entrepreneurship is often an efficient factor in stimulating rapid economic development, and it is particularly important for developing economies. Sustainable entrepreneurial ecosystems are a reliable guarantee for successful and functional entrepreneurship, and this study is of great significance to conduct an in-depth investigation of entrepreneurial ecosystems in developing economies based on a complex adaptive systems approach. By proposing a conceptual model of sustainable entrepreneurial ecosystems at the micro, meso, and macro levels, the authors reveal important propositions such as entrepreneurial intentions and adaptive tensions are the catalysts for shaping sustainable entrepreneurial ecosystems around local conditions, and effective dissemination of information helps to establish new network connections for legitimacy and then inject resources into the ecosystems, which is very inspiring and practical.

In conclusion, from my personal point of view, the significance of this paper is outstanding.
