

Review of: "Ecological diversity, structure and exploitation of rattan stands according to a disturbance gradient around the Nkoltang forest, Estuary province of Gabon"

C. N.Hari Prasath

Potential competing interests: No potential competing interests to declare.

The work was carried out in very precious manner with in-depth knowledge on ecological diversity estimation.

- i) The sentence are seems to be very long, try to cut short the sentences in to two/three sentences.
- ii) Photographs of the sampling plot may be included to enrich the manuscript.
- iii) Diversity indices studies may be included in the manuscript.
- iv) The statical package may be improved for validating the study.
- v) The introduction chapter can be improved by including the recent studies, similar it can be edited before acceptance of the manuscript.
