# NR2C2 wt Allele

National Cancer Institute

## Source

National Cancer Institute. *NR2C2 wt Allele*. NCI Thesaurus. Code C106598.

Human NR2C2 wild-type allele is located in the vicinity of 3p25 and is approximately 106 kb in length. This allele, which encodes nuclear receptor subfamily 2 group C member 2 protein, plays a role in hormone-mediated transcriptional regulation. Aberrant expression of the gene may be associated with corticotrophic malignancies and Cushing disease.
