

Review of: "A population-based model for rationing COVID-19 vaccine"

Meshach Ndlovu

Potential competing interests: No potential competing interests to declare.

The paper address critical components of COVID-19 dynamics and vaccines, it can be accepted only if the following two comments are clarified:

1. Throughout the paper there is a great occurrences were standard deviation was greater than the mean which gives rise to the following questions a. does the data allows negative values? b. what implications does this abnormal distribution in data have on the results?
2. For all tables with odds ratio please include the p-value column the p-values are computed using the same data used to calculate the odds ratios
