

# Review of: "Determination of Evapotranspiration and Crop Coefficients of Irrigated Legumes on Different Soil Types Using the FAO56 Approach"

A. K. Singh

Potential competing interests: No potential competing interests to declare.

Abstract: Needs revision. Mention the objective of the study, the methodology used, and the crop name very briefly. Provide significant results and the application of the study.

Materials and methods: Needs revision. Provide information only about the materials and methodology used. No need to write about the importance of each parameter of the study. It is already given in the introduction section.

Results and Discussion: The discussion part is missing or very poorly written. Needs major revision. The discussion may be written separately to understand what the author would like to communicate to the readers.

Conclusions: Needs revision. Rewrite by combining all information in one paragraph with the future use of this study.

Not recommended for publication in the present format.
