Potential competing interests: No potential competing interests to declare.

Overall the paper presents a very interesting study. This paper describes the use of Augmented Reality (AR) technology in the classroom setting. Below are my comments. I hope that if the authors choose to address my concerns, it can make the paper stronger.

1. Abstract: In the abstract section, the authors straightforwardly explained the focus of this research and the method used; however the problem and conclusion is not clearly explained.
2. Introduction: The author need to explain more in the introduction section as introduction should consist of at least items below including references:
 1. Problem statement that lead to the proposed project
 2. Aim & Objectives of the project. Reason for conduction a research.
 3. Block Diagram indicate the overall picture of the proposed project.
 4. State how your work differs from published work.
3. This paper lacks a background study or literature review section. The author need to explain the related research in this study. I suggest the author to extract items below from the literature:
 1. What - Aim
 2. Why - Problem
 3. Where - Which sub domain
 4. When - When the work is done
 5. How - Technique
 6. Advantage - Result
 7. Disadvantage - Limitation
4. Method: The author need to explain more about the methodology used in this study.
5. Results: The results section is too long and requires revision.
6. Discussion: The author's claims made in the discussion section are also required to be supported with evidence from literature review.
