I found this short paper very interesting for a biochemist as this physical presentation is not to be found in our text-books.

I have only 2 comments.

1. For a biochemist the first and second Kirchhoff's laws should be stated at the outset as many biochemists who have not studied advanced level physics will have only a hazy recall...
2. Fig. 1 is excellent, but Figs 2 and 3 are not explained in the captions or referred to in the text.
