Reverse of the manuscript with title Adolescents' knowledge of sexuality in a school context A descriptive study

Manuscript is well written and it does capture the required knowledge that needed to be addressed in the context of knowledge on sexuality, especially at the vulnerable group of Adolescents

As it is an age where the majority do pick up behavior from the peer group, e.t.c.

However, just a minor issue

In the abstract, throughout the whole manuscript, for example, this statement in the abstract

"The sample had an average age of 16,4 years, 51,1% boys and 48,5% girls"

What I don't understand is this 16.4 years or 16 &4 years, and is it 51.1%. Needs clarification

Best wishes
