Potential competing interests: The author(s) declared that no potential competing interests exist.

Pregnancy and fertility in chronic renal failure are important in terms of patient motivation, survival and emotional support. The study designed in moderate ranges (upper limit of serum creatinine 0.87 mg/dL, proteinuria 150-300 mg). The study can be enriched by expanding the number of patients and the upper limit (creatinine 1.5 mg/dL and proteinuria 1 g). There is no new scientific data. Despite this, the article was well prepared and successful.
