The submitted manuscript entitled: "Expanding Participatory Epidemiology to Explore Community Perceptions of Human and Livestock Diseases among Pastoralists in Turkana County, Kenya" is very important as it is coming at the time of the current global threat associated with emerging zoonotic diseases. The modified approach to the application of PE tools to livestock diseases concurrently with human diseases in line with the One Health concept was well articulated. It is comprehensive and well-written, and can add knowledge to the field. Therefore, I will recommend its acceptance for publication without revision.
