Review of: "Uncertainty-Driven Modeling of Microporosity and Permeability in Clastic Reservoirs Using Random Forest"

Najeh Alali¹

1. Independent researcher

The manuscript titled "Uncertainty-Driven Modelling of Microporosity and Permeability in Clastic Reservoirs Using Random Forest".

After a thorough review, I find this paper to be well-structured and clearly written. The results are presented in a straightforward and comprehensible manner, supported by a sufficient number of well-designed charts and graphs that aid in interpretation and understanding.

Furthermore, the paper includes an adequate number of relevant and up-to-date references.
