Review of: "Constructing a Set of Kronecker-Pauli Matrices"

Rosário Fernandes¹

1. Department of Mathematics, Universidade Nova de Lisboa, Portugal

The goal of this paper is the construction of $N \times N$ -Kronecker-Pauli matrices, where N is a prime integer.

The authors of the paper studied a very interesting subject and wrote a good paper.

They put many examples that help the reader to understand the concepts. For instance, after Definition 2, they wrote the matrices of the Weyl operators in the case of 3 dimensions. The English is acceptable.

This new version contains all changes required by the reviewers. So, in my opinion, the new version of the paper is correct and is suitable for publication in a journal such as Qeios.
