Dear Author,

Your paper is interesting and up to date with research trends. Especially when we are coming out of the covid pandemic. The paper points out various aspects for adopting UTAUT . However, there are some concerns and comments which need to be clarified/addressed. I hope they will be helpful to you.

Literature review and hypothesis development

Linking a model to your research is good. However, could you include a description to compare UTAUT model with other models, highlighting why UTAUT is better than other models.

Be consistent with the objectives on the first page, and last paragraph in the literature review and hypothesis development.

Data source

In this paper you seem to have a pretest only. If that is right, then a post test could be mentioned as an inclusion for future studies.

Independent variables

You mentioned something about Cronbach alphas as being acceptable/reliable. Could you provide references for that?

Discussion

Most articles cited in this section were consistent with your findings. Are there other articles with inconsistent findings other than your? If yes, include them in this paper for readers to understand.

Future directions

This research was conducted during the covid period. More suggestions can be made for this research to be repeated during other natural calamities like poor weather, and for distance learning.
