# Tumor Necrosis Factor Receptor 1-Associated DEATH Domain Protein

National Cancer Institute

## Source

National Cancer Institute. *Tumor Necrosis Factor Receptor 1-Associated DEATH Domain Protein*. NCI Thesaurus. Code C17907.

Tumor necrosis factor receptor type 1-associated DEATH domain protein (312 aa, ~34 kDa) is encoded by the human TRADD gene. This protein plays a role in apoptosis and the activation of NF-kappa-B signaling pathways.
