The article needs important language corrections in terms of technical language. It will be important to make comparisons with monetary income with other crops to know the increase in income of this crop. Absolute values have no scientific significance. The mean values must be accompanied by the standard deviations and, being 37 interviews, they could be worked on more individually with respect for the confidentiality of the interview. The work states that the average of those interviewed has been working in the area for 20 years. The work refers to novice farmers, that is, new farmers. But the work does not emphasize this fact, it takes into account that in the table the average age is 40 years and the time in which he has worked in the field is 20 years. This issue should be clarified. Since it is a work to be published, it is important to give an overview of the income of farmers in the region, as it is not possible to quantitatively extract the relative values of the different crops. The work needs major revisions
