

Review of: "Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study"

Paba Palihawadana

Potential competing interests: No potential competing interests to declare.

The study's findings on the prevalence of Buruli ulcer in the Jasikan Municipality, along with demographic characteristics, will contribute valuable information for public health interventions and further research in the field. Limitations, such as the small sample size, should be considered in interpreting the results.
