Potential competing interests: No potential competing interests to declare.

The article deals with the application of new methods in teaching such as Flipped classroom, Project-Based Learning and combines them with Agile management, which is nowadays the most frequently used project management approach in practice. In terms of content, the article is well structured and written, although very general, without specific suggestions for solutions. What I appreciate and what the authors have focused on in detail is what competences need to be developed in the new education. From my point of view, it is an "introductory article" where the authors present their future challenges in the development of the curriculum that should be developed as part of the project solution.
