

Review of: "Visualization of Home Security Sensor System Based on IoT Server"

Usman Abidemi Sarumi¹

¹ Near East University

Potential competing interests: No potential competing interests to declare.

My Recommendation: The paper is accepted, the manuscript address an important issue for home safety and security

Below are my suggestion

1. In the abstract the author didnt give description about related work and the methodology deployed in the main content.
2. Correct usage of word spelling e.g "Microcontroller " NOT "Mikrokontroler"
3. in the literature review the author didnt discussed about the related work , no survey on other research works that have done something similar
4. Fig 6 is not complete, it contain only one sensor.
5. there is no future recommendation.
6. In the reference , the author should use recent publications
