**Potential competing interests:** No potential competing interests to declare.

My observations on this paper are as follows:

1. The paper presents a literature review; however, the title "A Case Study" may not be appropriate.
2. The graphical abstract representation is not in sync with the abstract of the text.
3. Figure 1 needs improvement to represent actual field conditions and shape.
4. Representation of review data in the form of tables or graphics could make the paper more attractive.
5. Standard practice codes for the use of flash in flexible pavement construction across the globe, including India, are available and can be cited.
