**Potential competing interests:** No potential competing interests to declare.

I have gone through the article and I feel that it has interesting elements. However, some shortcomings need to be rectified in order to make the article more effective.

A geospatial perspective image of the study area would be useful. This should comprise an overview of regional topography, climatic patterns, seasonal attributes, availability of the natural resources such as water flow and solar irradiation. Also, the demographic and socioeconomic composition of the study area needs to be highlighted. Then only the justification behind Solar-Hydro Hybrid Energy System would be clear and its societal impact would be strengthened.
