**Potential competing interests:** The author(s) declared that no potential competing interests exist.

In this manuscript, the authors provided an overview of metabolic factors that can influence metabolic reprogramming and cell fate decision i.e EMT . The review has limited interest as provides only a general view of metabolic and biological processes that have been already well-described in other review articles. I suggest focusing on a single topic. For instance, when the authors refer to cell reprogramming they should consider that different types of cellular reprogramming exist. For instance, differentiation, de-differentiation, and transdifferentiation. The role of metabolism in the modulation of these processes should be better discussed.
