Potential competing interests: No potential competing interests to declare.

Comment 1 - The way of writing the paper is good as it contains the basics of all proofs and lemmas.

Comment 2 - The authors lack a comprehensive review of the latest periodic solutions of second-order non-linear coupled planar systems. Many important related works, along with their solution techniques, should be introduced in the first part of the paper.

Comment 3 - Comparisons can be made to show the superiority of your work over other existing methods.

Comment 4 - All equations used in the paper should be numbered and cited in the text.

Comment 4 - All figures should be elaborated more to understand the process.
