Review of: "A Brief Review of the Optoelectronic Properties of Delafossite Materials for Solar Cell Applications"

Md Sariful Sheikh¹

1. University of Wisconsin – Madison, United States

In this review article, the authors summarised the optoelectronic properties of delafossite materials for solar cell applications. The article is concise and well-represented in a focused field. I recommend its publication after addressing the following issue.

1. The efficiency reported in Table 1 is not current. The authors should also provide proper citations for each value reported.
