Dear Researchers,

Congrats on your paper! The content is very interesting and can help us use technology to search for a more sustainable future. To help the understanding of your work, I suggest analyzing if these suggestions can be applied:

- Bring more concepts of Neural Networks and explore this in discussions.
- To understand the context better, suggest specifying the population that lives around the laguna and specifying the main use of the area (urban or rural, for example).
- Specify if it is allowed to use the well water to water grass.
- In the discussion, explore if your study indicates which land indexes are more recommendable for grass analyses.
- Indicate if there is a reference to the difference between the reflectance of grass with watering and nutrient inputs.

I hope I contributed in a constructive way to your work and desire success in your studies.

Best regards,

Caroline Valera
