Hepatosplenic T-Cell Lymphoma

National Cancer Institute

Source

National Cancer Institute. *Hepatosplenic T-Cell Lymphoma*. NCI Thesaurus. Code C8459.

An extranodal, mature T-cell non-Hodgkin lymphoma that originates from cytotoxic T-cells, usually of gamma/delta T-cell type. It is characterized by the presence of medium-size neoplastic lymphocytes infiltrating the hepatic sinusoids. A similar infiltrating pattern is also present in the spleen and bone marrow that are usually involved at the time of the diagnosis.
