Dear Editor,

Thank you for kind invitation to review the article titled: The anti-staphylococcal activity of probiotic-contain gelatin and whey coatings on processed chicken breast. The manuscript require significant changes before it can be published.

1. The topic fits well into research on the protective role of food coatings.
2. The purpose of the research was sufficiently justified in the introduction.
3. The author need to remake the abstract part and it's important to include numeric results.
4. What is the abbreviation of RT?
5. Table 1 and Figure 1 represented the same results .Please just use one of them. Furthermore, they determine the increase in *S. aureus* growth with increasing time of storage. The author should revised the raw results carefully.
6. There is no discussion about the results. This section should be completely revised and interpretations of the results that should be considered

Extending the shelf life of food products is a positive outcome and crucial topic that deserves further investigation. The manuscript can be accepted with major revision.
