FES wt Allele

National Cancer Institute

Source

National Cancer Institute. *FES wt Allele*. NCI Thesaurus. Code C51076.

Human FES wild-type allele is located in the vicinity of 15q26.1 and is approximately 11 kb in length. This allele, which encodes proto-oncogene tyrosine-protein kinase Fes/Eps protein, plays a role in signal transduction. The FES gene is translocated in acute promyelocytic leukemia.
