# Alpha Fetoprotein Adenoviral Vector Vaccine

National Cancer Institute

## Source

National Cancer Institute. *Alpha Fetoprotein Adenoviral Vector Vaccine*. NCI Thesaurus. Code C48372.

A vaccine consisting of a recombinant adenoviral vector encoding alpha fetoprotein. After vaccination, expressed alpha fetoprotein may stimulate a cytotoxic T lymphocyte (CTL) response against tumor cells that express alpha fetoprotein, resulting in tumor cell lysis. (NCI05)
