Potential competing interests: No potential competing interests to declare.

The paper concerns a very recent and relevant topic, and addresses ethical issues of plagiarism and AI generated content. The work done is useful. But there is scope for improvement. The dataset taken is too small to derive conclusive results, and would benefit from more similar work. The paper also lacks a mathematical and analytical angle, and doesn't statistically or empirically prove its point beyond doubt. The quality of the paper can be improved with these additions.
