

Review of: "[Commentary] Artificial Intelligence, or Artifact Intelligence? Most AI Is Not Ready for Practice"

Florian Savoy¹

¹ Remidio Innovative Solutions (India)

Potential competing interests: Works and holds shares in a company designing AI solutions for healthcare.

The author mentions hundreds of articles about AI are being published every month, but cherry-picks five of them to draw conclusions about the whole technology. Like any technological innovation, AI is not without its challenges, and crafting a robust AI algorithm is a complex task. The pitfalls highlighted in this article are undeniably real. Yet, these should rather be viewed as markers differentiating subpar from high-quality AI systems, rather than as reasons to dismiss a technology that holds great potential to enhance patient care. This is particularly crucial in emerging countries, where there is a stark shortage of specialist expertise.
