Attenuated familial adenomatous polyposis

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Attenuated familial adenomatous polyposis. ORPHA:220460

Attenuated familial adenomatous polyposis (AFAP) is a mild form of familial adenomatous polyposis characterized by the presence of fewer than 100 adenomatous colonic polyps, a more proximal colonic location, a delayed age of colorectal cancer (CRC) onset and a more limited expression of the extracolonic features.
