Cystoid macular dystrophy

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Cystoid macular dystrophy. ORPHA:75381

Cystoid macular dystrophy is an autosomal dominantly inherited cystoid macular edema manifesting with macular atrophy, strabismus and, sometimes, pericentral retinitis pigmentosa (see this term). It is associated with a poor visual prognosis.
