This paper is very valuable for publication. The purpose of this study were to evaluate the associations of outcomes of physical exercise and alcohol conditions with poor health among cancer patients when controlling socioeconomic factors and to evaluate the joint effects of multiple cancers in the association of sleep hours, physical exercise, and alcohol conditions with poor health among cancer patients. The result of this paper is limitation associated with the purpose of this study. So I would like to know more the results that

- 1.The outcomes of physical exercise and alcohol conditions with poor health (show only some poor health)
- 2.How to control socioeconomic factors.
- 3.And the joint effects of multiple cancers.

Thank you so much
