1. The abstract needs to include more practical values.
2. The keywords should be arranged in alphabetical order.
3. The introduction needs a review of previous literature and a comparison. These references can provide valuable insights and support for your work: 10.1016/j.molstruc.2024.139867 ; 10.1016/j.molstruc.2017.01.054 ; 10.1007/s11696-022-02072-9 ; 10.1016/j.inoche.2022.109267 ; 10.1002/slct.202304429
4. Please list all the chemicals and devices used, along with their purity and the manufacturing companies, in the experimental section.
5. How was it confirmed that there are no negative or positive ions outside the coordination sphere in molar conductivity? Was the Mohr method or drops of silver nitrate used? Please add more discussion on this topic.
6. The preparation method needs a diagram to understand the mechanism of synthesis, along with a description of all conditions and auxiliary factors.
