Reef Fish in the Vitória-Trindade Seamount Chain of the Southwestern Atlantic: Biogeographical Corridors and Impact of Fishing.

Dear authors,

This article is a valuable contribution to the field, offering novel insights into the biogeography of reef fish communities and laying the groundwork for potential implications in fisheries management and conservation. The document is well-written and concise, and the tables and figures are clear and well-designed. I have some notes on the manuscript:- ----The English should be revised for grammar and spelling by a native speaker.

- Key words: The key words should be different from those in the title.
- Materials and Methods: The cruises occurred at different times of the year, but it is not specified whether they were daily, monthly, seasonal, etc.
- The format and structure of table 1 should be revised.
- References and citations should be reviewed.

Thank you for your attention to these points.
