**Potential competing interests:** No potential competing interests to declare.

In this article, a comparative analysis of structural and flow approaches to studying the vulnerability of complex network systems (NS) to targeted attacks and non-target lesions of various types has been carried out. Some points can be improved:

- The literature survey portion can be more informative. The comparative study can be improved with a comparison of the existing methods.
- The results and discussion parts should be included.
- Besides this, some future directions for the work can be discussed.
