Valomaciclovir

National Cancer Institute

Source

National Cancer Institute. *Valomaciclovir*. NCI Thesaurus. Code C96764.

A prodrug form of the acyclic guanosine derivative omaciclovir with activity against varicella zoster virus (VZV) and other members of the herpesvirus family. Valomaciclovir is converted in vivo to omaciclovir, a nucleoside analog inhibitor of VZV DNA polymerase.
