Potential competing interests: No potential competing interests to declare.

Good effort in drafting the manuscript. The following are some things to improve:

- a. Abstract: include objectives of your study.
- b. Keywords should be in alphabetical order. Please identify and explain the research gap to justify your proposed study.
- c. Methodology: What categorizations were made in the questionnaire? Provide rationale for the chosen quantitative approach. What about study procedures? Are there any inclusion and exclusion criteria? Provide background on your participants.
- d. Objectives are not clear. What tests were used to answer what RQs? Provide rationale for the chosen MANOVA?
- e. Why some of the findings in your study are not consistent with past studies? (e.g., methodology, population, intervention differences?)
- f. In addition to current write-ups, provide tangible or practical skills stakeholders can get from your study.
- g. Do not copy and paste information from SPSS straight into your write-ups. Simplify the presentation of data, ensuring only what matters most is included in the write-ups.

All the best.
